Activated Carbon Filter is an equipment which uses a piece of activated carbon to remove contaminants and impurities, utilizing chemical adsorption.Each piece of carbon is designed to provide a large section of surface area, in order to allow contaminants the most possible exposure to the filter media. One pound (450 g) of activated carbon contains a surface area of approximately 100 acres (40 Hectares).This carbon is generally activated with a positive charge and is designed to attract negatively charged water contaminants. Carbon filtering is commonly used for water purification, but is also used in air purifiers. As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Activated Carbon Filter industry in short supply on the market in the past few years, more and more companies enter into Activated Carbon Filter industry.
