An active optical cable (AOC) is a cabling technology that uses optical fiber between the connectors to improve the cable's performance. There is a rise in demand for AOC as it serves as an alternative to copper cables, due to its various advantages such as small bend radius for easy installment, low power consumption, and light weight. Applications of these cables have expanded, from high-performance computers to networking and storage with the support of many protocols. In addition, AOCs rely on different protocols, such as InfiniBand, USB, and Ethernet, for data transmission. Global active optical cables Application segment consists of Data Center, Consumer Electronics, High-performance Computing(HPC), Digital Signage and Others. The growing demand for active optical cable in data center, worldwide is one of the key drivers of the market.
