Abstracts

The global Adaptive Clothing market was valued at 241.54 Million USD in 2021 and will grow with a CAGR of 2.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Adaptive clothing are garments designed with medical function in mind for post-surgery patients, the disabled, elderly, rehabilitation patients, special needs children and adults, people with arthritis, stroke victims etc. Adapted clothes provide easy access to body parts without removing the entire garment, and make it easier to change or remove clothing. There are many styles and medical purposes for disabled clothing - mostly garments with zippers that provide access to parts of the body that would otherwise require the clothes to be removed entirely. With adaptive clothing, a disabled or elderly patient can retain dignity, can provide some level of self-care, and experience the added comfort of quicker access to medical appliances and needs for both them and for a nurse or physician.
