AdBlue (DEF), the worldwide operating fluid for SCR vehicles, is a non-toxic solution that transforms harmful Nitrogen Oxide NOx emissions from diesel-powered vehicles into harmless water vapor and nitrogen. AdBlue (DEF) reduces NOx emissions in the exhaust gas system of your SCR-equipped diesel vehicle, be it a truck, a bus, a tractor, a car, a van or an off-road vehicle. AdBlue (DEF), the worldwide operating fluid for SCR vehicles, is a non-toxic solution that transforms harmful Nitrogen Oxide NOx emissions from diesel-powered vehicles into harmless water vapor and nitrogen. AdBlue (DEF) reduces NOx emissions in the exhaust gas system of your SCR-equipped diesel vehicle, be it a truck, a bus, a tractor, a car, a van or an off-road vehicle. A key variable in the performance of AdBlue producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The materials of AdBlue include urea. This injects short-term volatility into margins and stock prices. Their prices follow the coal price, with a lag, and movements can inject volatility into producer margins. In general, most producers structure the majority of their contracts to include a 'pass through' clause that smooth the impact. Some processes are energy intensive and vulnerable to energy cost swings.
