Abstracts

The global Advanced Phase Change Materials (PCM) market was valued at 1157.6 Million USD in 2021 and will grow with a CAGR of 14.15% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Phase change materials (PCMs) are substances with a high enthalpy of fusion, also known as latent heat, meaning they can store large quantities of heat energy as they change phase. When melting, they absorb heat and maintain the temperature of the environment at a certain value until completely molten. When the temperature of the environment falls below the crystallisation temperature, the PCM will start to solidify, releasing large quantities of heat and maintaining the temperature until completely solid. In consumption market, the growth rate of global consumption is stable. USA? Europe? China? Japan? Southeast Asia? India are still the mainly consumption regions, due to the advanced production technology and rapid development of economy.
