A fastener is a hardware device that mechanically joins or affixes two or more objects together. In general, fasteners are used to create non-permanent joints; that is, joints that can be removed or dismantled without damaging the joining components. Welding is an example of creating permanent joints. Fasteners can also be used to close a container such as a bag, a box, or an envelope; or they may involve keeping together the sides of an opening of flexible material, attaching a lid to a container, etc. There are also special-purpose closing devices, e.g. a bread clip. Some types of woodworking joints make use of separate internal reinforcements, such as dowels or biscuits, which in a sense can be considered fasteners within the scope of the joint system, although on their own they are not general purpose fasteners. The aerospace fasteners report focus on the fasteners market in the aerospace industry. In the last several years, Global market of Aerospace Fasteners developed steadily, with an average growth rate of 7%. In 2016, Global revenue of Aerospace Fasteners is nearly 5 B USD; the actual production is about 590 K MT.
