The global Aerospace Materials market was valued at 107.99 Million USD in 2021 and will grow with a CAGR of 1.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Aerospace Materials market, Aerospace materials are materials, frequently metal alloys, that have either been developed for, or have come to prominence through, their use for aerospace purposes. These uses often require exceptional performance, strength or heat resistance, even at the cost of considerable expense in their production or machining. Others are chosen for their long-term reliability in this safety-conscious field, particularly for their resistance to fatigue. The aerospace materials market is unconcentrated. For the past 20 years, aerospace materials has been a niche market, and advanced technology and sufficient raw material supply is vital in this industry. Consequently, only limited companies are able to produce aerospace materials in their own land. Regionally, North America is the biggest consumption region of aerospace materials, about 38.94% of the global aerospace materials consumption, and the market share of Europe is also considerable. Consumption in China is more separated, but in fast development. The global consumption of aerospace materials has reached 681.5 K MT in 2016, with annual increase more than 1.3% for the past five years. Comparative, the development in China is little faster. The production structure in China is in low end industry compared

with developed countries. It is estimated that the market in China would be promising due to rigid demand in local industry. Generally, Precision Castparts Corporation dominates the high end market of aerospace materials, with several competitive players like Alcoa, Rio Tinto Alcan, Kaiser Aluminum, Aleris, Rusal, ATI Metals, Toray Industries. The import and export percent of this industry is high. North America and Europe are the main regions that export aerospace materials, with China the main import region. Technology is a vital factor in aerospace materials industry. The import and export of aerospace materials is limited the numbers.
