Agricultural robot is a robot deployed for agricultural purposes. The main area of application of robots in agriculture today is at the harvesting stage. Emerging applications of robots or drones in agriculture include weed control,[1][2][3] cloud seeding,[4] planting seeds, harvesting, environmental monitoring and soil analysis. Harvesting management is the most widely used application in agricultural robots as it plays a vital role in understanding the field variability and helps farmers in maximizing their yields. Increasing labor cost is motivating farm owners to adopt automated harvesting system. Automated harvesting management held the largest market share among all applications due to the high adoption rate among farmers and growers.
