### Abstracts

The global Air Core Drilling market was valued at 1131.2 Million USD in 2021 and will grow with a CAGR of 4.14% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Air core drilling is a well-known and widely used method when it comes to soft rock and soil formations that don't need heavy machinery in order to drill through to the desired depth. The standout feature of this drilling method is that it makes use of three blades that cut into the earth. North America was the leading region and accounted for 35.2% of the total industry. The regional market is characterized by technological advancements and increasing requirement for efficient drilling techniques for regolith and loose soil hydrocarbon regions. Surging energy requirements in the region, especially in the U.S., is pushing industry participants to explore unconventional reserves. This is estimated to drive the industry growth in the region over the forecast period.
