Air filter is a device which removes solid airborne particles that are generally harmful to human health if inhaled in the lungs. Particles include things such as dust, powder, pollen, mold, fibers, germs etc. It uses a physical and or chemical process with fibrous pleated paper, foam, cotton, ionizers, activated charcoal, absorbents, chemicals, catalysts etc., and cleans the air to the designed breathable level and odor free for the intended user. Air filters are used in applications where air quality is important, notably in building ventilation systems, transportation, public areas and industries. There are four automotive filters respectively are cabin air filters, intake (engine) air filters, fuel filters (diesel engines) and oil filter. Without oil, gas, air, and other filters, vehicle would be susceptible to contaminants that could cause wear and damage to parts inside engine. In this report, the data is based on the car ownership to describe the automotive Filter industry, namely a car needs 5 filters. Automotive filter market kept growing in recent years. As automotive market develop in a rapid period, automotive filter market will keep in rapid development. There are many manufacturers in the market and most of them have less production capacity. And the current demand for automotive filter product is growing.
