The global Aircraft Exhaust System market was valued at 613.38 Million USD in 2021 and will grow with a CAGR of 4.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aircraft Exhaust systems are a vital part of the aircraft propulsion mechanism. The exhaust system assembly in aircrafts is usually constituted with exhaust mufflers, exhaust stacks, tailpipes, risers, wyes and turbo exhaust transitions. An aircraft exhaust system is a multifaceted system unlike other exhaust systems. Aircraft exhaust systems are designed to take care of the engine NHS (noise, vibration and harshness) and prevent melting by handling internal and external temperature variances. The main purpose of an exhaust system in an aircraft is to take the heat and gases away from the engine, which can cause a fire onboard and prevent leakage of poisonous gases into the cockpit. There are mainly two types of exhaust systems used on aircraft engines - short stack systems and collector systems. Short stack systems are used on low-powered engines that emit less noise. Collector systems, on the other hand, are used on most large engines as they provide better scope for maintenance. In turbo supercharged engines, engine exhaust gases are collected to run the compressor in the supercharger. Though the existing technologies for aircraft exhaust systems are advanced, there is always scope for improvisation due to the ever rising demand for cleaner exhaust systems from end use sectors.
