Airplane Carbon Brake Disc is mounted in airplane wheel brake device, it is an important component which is usually used for takeoff, landing, gliding, turning and stopping the. It realizes brake and ensures the safety of a flight and is belonging to the consumable parts. There are two kinds of airplane brake disc, powder metallurgy brakes and carbon brakes. It is the inevitable trend that carbon brakes, which have excellent mechanical properties, thermal physical properties and good friction and wear properties, will replace powder metallurgy brakes in the aviation industry. Airplane carbon brake disc is an advanced technique in brake device. Compared to steel brakes, it is lighter, has better heat dissipation property, and does not reduce the energy absorption characteristics at high temperatures. Airplane carbon brake disc technology used in aircraft braking areas since the 1960s. Carbon brakes can withstand high temperatures and not easy to wear. Therefore, it has won the trust of world`s major aircraft manufacturers and airlines. Carbon brakes gradually replaced the traditional powder metallurgy process brakes.
