Full body scanners are one of the effective components in the security screening domain. Full body scanners are devices which primarily detect suspicious objects on a person's body for during security or surveillance checks. Full body scanners are primarily deployed across areas under high security vigilance and high strategic importance, such as VVIP residences, defense headquarters, airports and others. Full body scanners enable the operators/invigilators to see the alternate-wavelength image of the person's body that helps in the detection of suspicious items hidden under the attire or prosthetics. Unlike metal detectors, full body scanners also detect non-metal objects, such as non-metallic bombing equipment and surgically implanted bombs. On the basis of technology, the millimeter wave scanner segment is estimated to grow at the highest rate among other technologies.
