The global Alumina Trihydrate (ATH) Flame Retardant market was valued at 1652.99 Million USD in 2021 and will grow with a CAGR of 2.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aluminum hydroxide is the largest and most widely used inorganic flame retardant additive. It can not only resist flame retardation, but also inhibit the emission of smoke and absorption of toxic gases such as hydrogen halide. North America is expected to remain the largest market by value and volume both due to growth in end use applications and wider acceptance of ATH flame retardants in various end-use industries.
