Aluminum fluoride (AlF<sub>3</sub>) is a white powder, which is mainly used as an additive for the production of primary Aluminum metal. It essentially lowers the melting point of the alumina feed and together with cryolite; it increases the electrolyte's conductivity of the solution, reducing the electric power consumption. Aluminum fluoride is also used as catalyst of organic synthesis and materials of synthetic cryolite. The production of Aluminum is the largest application of aluminum fluoride. As essential additives, nearly 20 kg aluminum fluoride is required for the production of 1 MT Aluminum. Market competition is intense. Do-Fluoride, Hunan Nonferrous, Fluorsid and Hongyuan Chemical are the leaders of the industry. With the stricter environment protect policies, many factories from China facing the risk of stopping production and technology improvement. On the other hand, due to the higher price, some Europe Companies like UC RUSAL are also planning to build new production line.
