Abstracts

The global Aluminium-Scandium market was valued at 69.51 Million USD in 2021 and will grow with a CAGR of 6.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The chemical composition of the aluminium-scandium master-alloy is 2% scandium and the balance is 99.7% aluminium. The master alloy is used to add scandium to Al-Mg-Zr containing alloys, which are used in the form of sheet and plate. These sheets and plates are mainly used by aircraft manufactures. The scandium content in the aluminium sheet and plate varies from 0.2-0.4% scandium. Aluminium scandium containing alloys combine high strength, ductility, weld-ability, improved corrosion resistance and a lower density (as a result of the magnesium in the alloy). The combination of all these properties makes aluminium-scandium containing alloys extremely suitable for aerospace industry. RUSAL was the world`s biggest manufacturer in the Aluminium-Scandium industry, accounted for 22% revenue market share of the global market, followed by Intermix-met, KBM Master Alloys, Stanford Advanced Materials, HNRE, Hunan Oriental Scandium, Guangxi Maoxin, AMG Aluminum, Codos, TOPM, Shanghai Diyang. The top 5 companies had a combined market share of 63% of the global total. Europe was the largest consumption area in the world in 2018.
