The global Aluminum Curtain Wall market was valued at 5709.78 Million USD in 2021 and will grow with a CAGR of 4.14% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aluminum curtain wall is a modular frame assembly arranged side-by-side and top-to-bottom interlocked relation. It has improved four corner joint construction providing more than adequate weather tightness. Alignment is provided for structurally connecting lower head rails in axially aligned relation. Aluminum curtain wall contains filler strip and lap strip that cooperate with the alignment to seal a gap and space presented between adjacent interlocked head and sill rails, thereby providing weathertight four corner joint. Curtain walls consist of panels made up of different materials such as glass and metal. Metal curtain walls with aluminum panels are called aluminum curtain walls. The Asia Pacific region accounted for a significant market share in 2016 and is expected to grow at a CAGR exceeding 10.0% over the forecast period. The region includes developing nations, such as India, China, and Japan, whose rate of development is faster than most other developing nations in the world. Moreover, Asia Pacific is anticipated to account for nearly half of the global construction industry by 2020. A healthy spread of construction activity supports the stability of the Asian markets, along with government intervention enhancing a majority of projects for infrastructure development. Developed regions, such as Europe and North America, are expected to witness moderate growth

from 2017 to 2025. The regions accounted for over 40% of the total market share in 2016. The growth in the regions can be attributed to increasing disposable income, growing construction spending, and the steady demand for sustainable curtain walls for reducing pollution and enhancing moisture resistance in high precipitation areas.
