The global Amifostine market was valued at 45.86 Million USD in 2021 and will grow with a CAGR of 2.28% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Amifostine (Ethiofos) is a cytoprotective adjuvant used in cancer chemotherapy and radiotherapy involving DNA-binding chemotherapeutic agents. It is marketed by Clinigen Group under the trade name Ethiol. Amifostine is a pro-drug which is activated to the free thiol metabolite at the tissue site. The thiol metabolite is responsible for most of the cytoprotective and radioprotective properties of amifostine. It is readily taken up by cells where it binds to and detoxifies reactive metabolites of platinum and alkylating agents as well as scavenges free radicals. Other possible effects include inhibition of apoptosis, alteration of gene expression and modification of enzyme activity. Healthy cells are preferentially protected because amifostine and metabolites are present in healthy cells at 100-fold greater concentrations than in tumour cells. Consumption of amifostine mainly concentrates in North America. In 2016, the region consumed 780 K Unit, holding about 52% market share globally. The follower is Asia-Pacific, with about 41% consumption share. The market is relatively concentrated and there are just a few suppliers in the market, such as Clinigen Group, Sun Pharmaceutical, Merro Pharmaceutical and so on. Clinigen Group acquired the business from AstraZeneca in the year of 2014 and signed an agreement with Cumberland in the year of 2016. Under

the agreement, Cumberland acquired the exclusive rights to commercialize Ethyol in the United States. Merro Pharmaceutical own the largest sales share in China. Amifostine shows good effect in reducing harmful effects of cisplatin chemotherapy on kidneys in women treated for advanced ovarian cancer as well as relieving dry mouth problems (xerostomia) with head and neck cancer patients undergoing radiation treatment. It is estimated that the amifostine market will keep upward tendency and to be worthy of 49.99 million USD in 2023 globally.
