Amino resins are important materials that come under thermoset polymers. They are used in paints and coatings, molded articles, adhesives, and sealants. Amino resins are produced by reacting formaldehyde with amino compounds such as melamine, benzoguanamine, or urea. They have excellent tensile strength, hardness, and impact resistance. Amino resins are of three types: urea formaldehyde, melamine formaldehyde, and melamine urea formaldehyde. UF resin occupy the largest share in Amino resins revenue followed by MF resin and MUF resin respectively. MF resin is the costliest amino resin while UF resin is the most economical.
