Ammonium alum has the formula $\text{NH}_4\text{Al}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$. Ammonium alum is used for many of the same purposes as potassium alum and soda alum. Ammonium alum finds applications in tanning, dyeing textiles, making textiles flame retardant, in the manufacture of porcelain cements and vegetable glues, in water purification and in some deodorants. The classification of ammonia alum includes ammonia alum powder and ammonia alum granules, and the proportion of ammonia alum powder in 2016 is about 66%, and the proportion is in decreasing trend from 2012 to 2016. Ammonia alum is widely used in water treatment, pharmaceutical field, food field and other field. The most proportion of Ammonia alum is water treatment, and the consumption proportion is about 40% in 2016. China region is the largest supplier of ammonia alum, with a production market share nearly 90% in 2016. India is the second largest supplier of ammonia alum, enjoying production market share nearly 3% in 2016. China is the largest consumption place, with a consumption market share nearly 86% in 2016. Following China, India is the second largest consumption place with the consumption market share of 3.5%.
