Ammonium Nitrate is a chemical compound with the formula NH_4NO_3 . It is composed of nitric acid and salt of ammonia. In room temperature, ammonium nitrate appears in a white crystalline form and it is also colorless. These crystals are rhombohedra in shape but when they are subjected to temperatures above 32 degrees Celsius, they change to monoclinic crystals. Due to the wide downstream consumption of the ammonium nitrate, it has large production. Recent years, there are some companies starting to research and development the product. At present, the top 5 companies account for about 19% of global market share in ammonium nitrate field.
