Abstracts

The global Ammonium Sulfate market was valued at 3005.27 Million USD in 2021 and will grow with a CAGR of 0% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ammonium sulfate (IUPAC-recommended spelling; also ammonium sulphate in British English), $(\text{NH}_4)_2\text{SO}_4$, is an inorganic salt with a number of commercial uses. The most common use is as a soil fertilizer. It contains 21% nitrogen and 24% sulfur. The global market for ammonium sulfate is highly dependent on a number of factors such as the fertilizer industry and the stringent environmental regulations related to it. However, as a major portion of ammonium sulfate is manufactured involuntarily as a co-product or by-product, its volume of production is influenced more by the general industrial output than by the demand for fertilizers. Moreover, as ammonium sulfate is a by-product of caprolactam, the market is highly affected by developments in the caprolactam market. With the growing production of caprolactam in Asia Pacific, potential for interference in the ammonium sulfate industry is anticipated to be significant over the next few years. The global demand for ammonium sulfate is expected to increase in areas with rising sulfur-deficient soils, especially in areas with tight environmental controls such as North America.
