Abstracts

The global AMOLED Display market was valued at 281.75 Million USD in 2021 and will grow with a CAGR of 25.07% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An AMOLED display consists of an active matrix of OLED pixels generating light (luminescence) upon electrical activation that have been deposited or integrated onto a thin-film-transistor (TFT) array, which functions as a series of switches to control the current flowing to each individual pixel. At present, the OLED Display industry is still in the developing stage, the world's large production are mainly concentrated in Korea. The technology and market share is monopolized by Samsung and LG. Many manufacturers are in the research level and begin to mass production in 2015, Like EDO, established in 2012 in china, announce the AMOLED Display capacity is 15K/month. And JOLED Inc, joint venture of Japan Display, Sony and Panasonic, which set up to break the monopoly of Samsung and LG, JOLED will mainly target laptops and tablets. 2. AMOLED will become the mainstream in future, and as PMOLED advantage will gradually be replaced by AM-OLED, market share will shrink, but the global OLED market stage is still the coexist of AM-OLED and PMOLED. Due to the addition of manufacturers and project investments, Global OLED market have brought more competitive, but the manufacturers which mastered the core technology of OLED and has a long industrial chain business has a cost advantage. With the development of

consumer electronics and wearable devices, China will become the world's largest OLED consumption market, many manufacturers have invested a lot of money in the technology research and production line construction. OLED Display is a high technology industry, especially the manufacturing material and equipment. With the downstream application area expanding, the cost will decrease. If it replaces the LCD/LED, the market is very huge. Although OLED Display brings a lot of opportunities, the research group recommends that new entrants just having money but without technical advantage and upstream and downstream support do not enter into this field.?
