A particle counter is a sophisticated monitoring instrument that counts the amount of particulate contamination. It can be used to detect contaminants from the air, a surface or a liquid. Some examples of these particles can be anything from oil, metal shavings, dust, smoke, ash, mold, or other biological contaminants. As an important and necessary instrument for the maintenance of cleanroom, achievement of ultra-pure water or ultra-pure oil for some specific R&D or production requirements, the demand of particle counters is growing year by year. In 2011, the global sales volume of particle counter was about 22.6 thousand units.
