The anesthesia machine is complex in structure and consists of a gas source, a gas mixing system, an anesthetic gas evaporator, a breathing circuit, a ventilator, an exhaust system, a monitoring system, an information management system, etc., and the user's safety, accuracy, reliability and Ease of use is higher. After more than half a century of development, the function of the anesthesia machine has basically not changed. The development of the gas supply system, the mechanical gas mixing system, the mechanical anesthetic gas evaporator, and the exhaust emission system has become more mature, and the breathing circuit and the respirator , Electronic gas mixing systems, gas monitoring, respiratory monitoring, patient monitoring, electronic anesthetic gas evaporators, self-inspection functions before equipment use, and information management systems are constantly evolving and improving. In view of technology, the worldwide anesthesia gas blender market has been additionally portioned into dual tube flow meter and tube flow meter. Dual tube flow meter fragment ruled the worldwide market because of their favorable circumstances over tube flow meters, for example, accuracy, efficiency and less usage of energy.
