## Abstracts

The global Angiography Catheters market was valued at 995.47 Million USD in 2021 and will grow with a CAGR of 6.04% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Angiography Catheter is designed for optimal performance and is offered in a broad range of curve selections. In catheter angiography, a thin plastic tube, called a catheter, is inserted into an artery through a small incision in the skin. Once the catheter is guided to the area being examined, a contrast material is injected through the tube and images are captured using a small dose of ionizing radiation (x-rays). The global angiography catheters market is growing steadily and is likely to grow at a significant pace during the forecast period. This is due to the presence of many global and regional vendors that offer a wide range of angiography catheters. Also, it has been noted that the Tier-1 and Tier-2 companies dominate the market. In an attempt to gain a competitive advantage, vendors are increasingly focussed on advanced technologies to develop new products.
