Angiography or arteriography is a medical imaging technique used to visualize the inside, or lumen, of blood vessels and organs of the body, with particular interest in the arteries, veins, and the heart chambers. In 2017, Europe dominated the global angiography equipment market. The large share of the European market can be attributed to factors such as the high prevalence of diseases such as cancer and CVD, the faster and easier product approval process in the region, the large number of ongoing research activities, growing government and public-private investments, increasing number of awareness programs, and rising adoption of angiography devices due to a large number of angiography procedures performed in European countries.
