Dispersant or Dispersing Agent is either a non-surface active polymer or a surface-active substance added to a suspension, usually a colloid, to improve the separation of particles and to prevent settling or clumping. The role of the dispersant is to make the dispersion process easier and more stable. Dispersant or Dispersing Agent is either a non-surface-active polymer or a surface-active substance added to a suspension, usually a colloid, to improve the separation of particles and to prevent settling or clumping. Anionic dispersant is the most widely used dispersant type, which accounted for more than 40% of total dispersant market. Anionic Dispersants consists of non-polar, negatively charged, oleophilic hydrocarbon moieties and polar hydrophilic groups. The two groups are at both ends of the molecule, forming an asymmetric hydrophilic lipophilic molecular structure. It includes carboxylate, sulfate salt (R-O-SO₃Na), sulfonate (R-SO₃Na) and others. Anionic dispersant has good compatibility and is widely used. Sulfonates and Sulfates are the most widely used anionic dispersants, which accounts for 86.14% of global market. Other types, like Carboxylates has been used in specialty Dispersants applications. In terms of volume, the global Anionic Dispersants Production was 1383.7 K MT in 2017, and it is predicted to reach 1859.5 K

MT in 2023.
