Abstracts

The global Anthracite Filters market was valued at 462.72 Million USD in 2021 and will grow with a CAGR of 5.61% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In our report, we discussed the anthracite filter media, which are filtration materials for turbidity and SS removal. Since the specific gravity is lighter than that of Filter Sand, it is much used in combination with Filter Sand in dual-media filtration, to consist reverse grain layers after backwashing. In addition, because of high content carbon of this product, it has high resistance to various chemicals and high physical strength so that it is widely used for city and industrial water purification. The CAGR of global anthracite filters market in the past five years is 4.39%, and we estimate a CAGR of more than 5.48% during the forecast period as the global market is becoming more standardized and mature over time. The sales market is fragmented, with global market share of 9.84%, 24.36% and 19.64% of China, USA and Europe in 2014, and will keep this fragmented status as anthracite filter is a widely used product. With the increasing emphasis on water treatment, refined anthracite filters will get a larger market share gradually, and get more attention year by year for its high water treatment performance.
