Anticorrosive coating refers to a kind of liquid or solid material coated on the surface of an object that can form a film under certain conditions to protect, decorate or have other special functions (insulation, rust prevention, mildew prevention, heat resistance, etc.).Among many applications, coal-fired power generation has the largest market share. In 2019, consumption of coal-fired power generation reached 84 percent. The industry producers are mainly PPG, Akzo Nobel, Haihong Senior, Jotun paint, Kansai paint, Xuanwei and so on. Akzonobel is the world`s largest producer, with an annual output of nearly 20,000 tons in 2019, accounting for 12% of global output. There are three main types of anti-corrosion coatings in the thermal power industry: solvent-based, water-based and powder coatings, among which solvent-based is the most important product type. In 2019, the output of this type will exceed 100,000 tons, accounting for 66% of the global total. Next is water-based coating, this kind of coating is a kind of environmental protection coating, as the enhancement of environmental protection consciousness, its growth rate will exceed solvent-based coating in the future. As the main market of thermal power is China, the major consumer of anti-corrosion coatings in thermal power industry is China (mainland), whose consumption

reaches 134,000 tons in 2019, accounting for 86% of the total global consumption. Followed by the US, with less than 5 per cent of consumption.
