An earplug is a device that is meant to be inserted in the ear canal to protect the user's ears from loud noises or the intrusion of water, foreign bodies, dust or excessive wind. An estimated one-third of the all impaired hearing cases are related to noise exposure. Occupational noise exposure is the one of the most common causes of noise induced hearing loss in the U.S. Specifically, increasing number of workers at construction or manufacturing site and increasing adoption of hearing control devices in developed regions to boost growth of the hearing protection market. Noise-induced hearing loss is one of the prominent diseases in the U.S. and the second-largest self-reported occupational illness or injury. Though Asia Pacific is characterized by low awareness regarding hearing protection, the hearing protection market in region is expected to witness significant growth in the near future. North America Earplugs market size was valued at around USD 272.73 million in 2017. Europe was expected to exceed USD 245.39 million by 2017, at a CAGR of over 11.12 % from 2012 to 2017. Asia-Pacific is estimated to be the third largest market for Earplug in 2017, with China expected to lead the market in terms of growth rate from 2012 to 2017.
