Anti-static floor (also called ESD floor) is a kind of floor that can dissipate the electric charge by adding conductive material when it is grounding or connecting to lower potential. Anti-static flooring can either be static dissipative or static conductive. EU, US and China are the major manufacturing markets in the world with market share of 29.64%, 23.95% and 15.34% respectively in 2015. Mohawk Group is the world leader, following by Armstrong. Huatong is the China leader. In recent years, the development of the electronic industry and internet will promote the consumption of the anti-static floor industry. Generally, the key point of processing the anti-static floor is adding of the conductive power into the PVC. At present, this core technology is mainly owned by the European and American high-end enterprises. China manufacturers mainly rely on using the PVC or HPL surface to cover the steel or aluminum alloy base materials. So the anti- static access floor is common in China.
