An antifreeze is an additive, which lowers the freezing point of a water-based liquid. An antifreeze mixture is used to achieve freezing-point depression for cold environments. Common antifreezes increase the boiling point of the liquid, allowing higher coolant temperature. A coolant is a substance, typically liquid or gas, which used to reduce or regulate the temperature of a system. By region, Asia-Pacific accounted for the highest share of consumption in 2019, at more than 34 percent. The leading producers in the industry are Prestone, Shell and ExxonMobil, accounting for 12.34%, 11.80% and 7.81% of revenues respectively.
