## Abstracts

The global Antipsychotic Drugs market was valued at 1407.98 Million USD in 2021 and will grow with a CAGR of 3.35% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Antipsychotics, also known as neuroleptics or major tranquilizers, are a class of medication primarily used to manage psychosis (including delusions, hallucinations, paranoia or disordered thought), principally in schizophrenia and bipolar disorder. During 2016, the second-generation antipsychotic drugs segment dominated the antipsychotic drugs market with the highest market shares. These drugs are preferred over first-generation antipsychotic drugs because they involve lesser side effects and are highly efficient in the treatment of various mental disorders. The adoption of these drugs is high because they reduce EPSE, controls symptoms, and maintains the normal levels of prolactin. This segment yields a high prescription value that in turn, will drive growth in the segment during the forecasted period.
