The global Aortic Valve Replacement Devices market was valued at 5507.41 Million USD in 2021 and will grow with a CAGR of 6.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aortic valve replacement is a procedure in which a patient's failing aortic valve is replaced with an artificial heart valve. The aortic valve can be affected by a range of diseases; the valve can either become leaky (aortic insufficiency / regurgitation) or partially blocked (aortic stenosis). Current aortic valve replacement approaches include open heart surgery, minimally invasive cardiac surgery (MICS) and minimally invasive, catheter-based (percutaneous) aortic valve replacement. In 2017, North America was the leading revenue contributor, commanding approximately 42.0% of the overall market value. Increasing prevalence of valvular disorders, rising geriatric population, and growing awareness regarding benefits of TAVR over other surgical procedures are some of the key factors stimulating the growth of the regional market. Moreover, favorable government initiatives and reimbursement policies are anticipated to help the market in the region gain tremendous momentum.
