## Abstracts

The global Application Delivery Controller (ADC) market was valued at 3222.21 Million USD in 2021 and will grow with a CAGR of 3.8% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An application delivery controller (ADC) is a computer network device in a datacenter, often part of an application delivery network (ADN), that helps perform common tasks, such as those done by web sites to remove load from the web servers themselves. Many also provide load balancing. ADCs are often placed in the DMZ, between the outer firewall or router and a web farm. North America application delivery controller market accounted for over 25% of the total revenue share in 2015, primarily owing to the well-established IT & telecom sector in the region. The U.S. held the major share in the revenue on account of the presence of a large number of enterprises relying upon the application delivery controllers for performance improvement as well as managing the network traffic. Furthermore, trends such as virtualization, increasing adoption of cloud and SDN devices, and network security are anticipated to positively impact the market growth over the forecast period.
