The global Application Specific Integrated Circuit (ASIC) market was valued at 1605.41 Million USD in 2021 and will grow with a CAGR of 8.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An ASIC is an integrated circuit made for a specific user or a particular electronic system. The versatility and mass production of digital integrated circuits have greatly reduced the cost of electronic products, and promoted the popularization of computer communication and electronic products. At the same time, it also created the contradiction between general and special, and the disconnection between system design and circuit production. At the same time, the larger the size of the integrated circuit, the more difficult it is to change the specific requirements when setting up the system. In order to solve these problems, an application-specific integrated circuit featuring user participation in the design has emerged, which can realize optimal design of the whole system, superior performance and strong confidentiality.
