The global Aptamers market was valued at 56.33 Million USD in 2021 and will grow with a CAGR of 12.95% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aptamers are high affinity molecules that are derived from RNA or DNA. These are normally generated using a synthetic process called 'Systematic evolution of ligands by exponential enrichment' (SELEX). The global aptamers market is poised for rapid growth between 2018 and 2025. Factors such as strong trend of R&D investments in biotechnology and pharmaceutical industries, the patent expiration of systematic evolution of ligands by exponential enrichment technology (SELEX), technological advancements, and the low cost and high efficiency of aptamers in binding to large molecules as compared to antibodies are driving the growth of the aptamers market.
