This report studies the Articulated Dump Trucks market. Articulated Dump Truck is a very large heavy-duty type of dump truck used to transport loads over rough terrain, and occasionally public roads. The main body of the dump truck is generally based on that of a flatbed truck, with one axle beneath the cab and anywhere from one to three axles beneath the dump box. The dump box itself generally has a tailgate that is hinged at the top so that it will open automatically when it is being dumped. The dumping mechanism is powered hydraulically in order to prevent compression problems that can sometimes be encountered when using pneumatic systems. The engine of the dump truck can be either gasoline-powered or diesel-powered, but is generally a large internal combustion engine regardless of the fuel type used. In the last several years, global market of Articulated Dump Trucks developed rapidly, with an average growth rate of 5.32%. In 2017, global revenue of Articulated Dump Trucks is nearly 5268 M USD; the actual production is about 15.4 K Unit.
