An articulated robot is a robot which is fitted with rotary joints. Rotary joints allow a full range of motion, as they rotate through multiple planes, and they increase the capabilities of the robot considerably. An articulated robot can have one or more rotary joints, and other types of joints may be used as well, depending on the design of the robot and its intended function. The global revenue of Articulated Robot market was valued at 5254.52 M USD in 2017 and is expected to reach USD 10939.42 M USD in 2025. In the future eight years, we predict the CAGR of global revenue is 9.60%.
