Abstracts

The global Artificial Limbs and Joints market was valued at 1635.92 Million USD in 2021 and will grow with a CAGR of 4.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A limb or joint lost through accident, disease, or birth defect may be replaced with an artificial limb or joint. Such a replacement is called a 'prosthesis,' from the Latin word meaning 'addition.' Crude artificial limbs have been used since the earliest loss of an arm, leg, hand, or foot. North America emerged as one of the largest revenue generating region of the market in 2013. Presence of developed healthcare infrastructure, high healthcare expenditure and continuous R&D activities pertaining to the development of novel digital and computerized limbs are key factors attributing to its large share. Asia Pacific is expected to exhibit promising growth over the forecast period owing to the presence of untapped market opportunities coupled with continuously developing healthcare infrastructure. The artificial limb and joints market is oligopolistic in nature with approximately five companies occupying nearly 90% of the revenue.
