The global Astronomical Telescope market was valued at 18.15 Million USD in 2021 and will grow with a CAGR of 8.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Astronomical telescope is an optical instrument used to view heavenly bodies such as moon, stars, planets and distant objects. An astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It is usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of the objective. It is also a combination of two lenses. Currently, the market of astronomical telescope is getting more and more concentrated. The global largest producer of astronomical telescope Synta, which holds three top brands of astronomical telescope (Celestron, Meade and Sky Watcher) and OEM for other brands, is announced to account for about 60% of the global total market. As to the product types and applications of astronomical telescope, refracting telescope and reflector telescope are main types and entry-level telescope accounts for about 90% of the total market.
