Abstracts

The global Atmospheric Water Generator (AWG) market was valued at 1.1 Million USD in 2021 and will grow with a CAGR of 23.73% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Atmospheric water generators are useful where pure drinking water is difficult or impossible to obtain, because there is almost always a small amount of water in the air that can be extracted. In addition to atmospheric water production, the Appliance can also be used as a conventional water purifier by connecting it to an external municipal (city) water source. Lack of ground water resources is one of the key reasons promoting the demand for AWG across GCC countries. These machines are gaining importance in the Middle East at various workplaces such as municipal agencies, banks, hospitals, and schools owing to high purity offered by these systems.
