The global Atropine market was valued at 543.94 Million USD in 2021 and will grow with a CAGR of 1.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Atropine is a medication to treat certain types of nerve agent and pesticide poisonings as well as some types of slow heart rate and to decrease saliva production during surgery. It is typically given intravenously or by injection into a muscle. Eye drops are also available which are used to treat uveitis and early amblyopia. The intravenous solution usually begins working within a minute and lasts half an hour to an hour. Large doses may be required to treat some poisonings. Atropine is a medication to treat certain types of nerve agent and pesticide poisonings as well as some types of slow heart rate and to decrease saliva production during surgery. It is typically given intravenously or by injection into a muscle. Eye drops are also available which are used to treat uveitis and early amblyopia. The intravenous solution usually begins working within a minute and lasts half an hour to an hour. Large doses may be required to treat some poisonings. Atropine industry is relatively fragmented, manufacturers are mostly in the North America, Europe and Asia, and China market production volume accounted for more than 25.43% of the total production volume of global Atropine in 2017. C?PHARMA is the world leading manufacturer in global Atropine market with the market share of 9.19%, in terms of revenue, followed by RESONANCE LABORATORIES, ROLABO OUTSOURCING, Minsheng and CR Double-Crane. As for the volume segment, global

Atropine production decreased to 3862.8 Kg from 4247.4 Kg in 2013. Due to low prices, small profit margins and a relatively narrow market, many companies have abandoned production of atropine, and a shortage of atropine has appeared in the market. This is the result of long-term effects of market behavior. The average price of Atropine will fall further. The product average price declined in the past few years due to its cheap drug properties, and the average price will keep this trend in the few future years due to market vicious circle.
