The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Audio IC is a chip widely used as audio processor, audio amplifiers, MEMS microphone and subsystems. It is widely used in the Portable Audio, Computer Audio, Computer Audio, Automotive Audio, etc. An audio amplifier is an electronic device that increases the strength (amplitude) of audio signals that pass through it. An audio amplifier amplifies low-power audio signals to a level which is suitable for driving loudspeakers. The input signal of an audio amplifier may only measure a few hundred microwatts, but its output may be tens or even thousands of watts. Design parameters for audio amplifiers include gain, frequency response, distortion and noise. At present, in the foreign industrial developed countries the Audio IC industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the United States. Meanwhile, foreign companies have more mature equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with china's companies; the manufacturing cost is competitive disadvantage. Chinese Audio IC industry has developed into a national industry with certain research, currently China has become international Audio IC large consumption country, but the Audio IC product are almost

the low-end product. There is no competitive in the international market .Currently, the global major manufacturers are: Cirrus Logic, Qualcomm, TI, etc. The Audio IC product is monopolized by the American manufacturers.
