Autoclave is a device that sterilizes instruments using steam under pressure. Autoclaves are widely used commercially as well as in-house across the world. These are the metallic cylindrical vessels that provide physical method of sterilization of the equipment. Autoclaves works by inactivating or killing transmissible agents (such as bacteria, viruses and fungi) by means of steam, heat and pressure to sterilize equipment. The price of Pharmaceutical Autoclaves is slightly decreased in nearly five years. The price difference between different volumes and technical levels is very large. Pharmaceutical Autoclaves ranging in 200 - 1000 Liter, have the largest consumption volume, 4.9 k units in 2018. Incumbents have brand identification and customer loyalties. This forces entrants to spend heavily to overcome these loyalties. Startups may bring a different product to market, but its benefits must be clearly communicated to the target customer. Startups must find an effective positioning, which often requires marketing resources beyond their means.
