The global Automatic Bottle Blowing Machine market was valued at 2223.79 Million USD in 2021 and will grow with a CAGR of 2.29% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bottle Blowing Machine is used during the manufacturing process to form the hollow parts. Bottle Blowing Machine creates plastic bottles according to the recipe, for example manufacture the bottles by specifying the capacity. Blow molding (BrE moulding) is a specific manufacturing process by which hollow plastic parts are formed and can be joined together: It is also used for forming glass bottles or other hollow shapes. In general, there are three main types of blow molding: extrusion blow molding, injection blow molding, and injection stretch blow molding. Growing consumer preference for bottled water will foster the need for blowing machine market. However, global Automatic Bottle Blowing Machine market may encounter with a major challenge limiting its growth in near future, attributed to stringent government regulations in different countries. Huge, uncontrollable waste produced due to plastic on a global level is forcing governments to restrict the production and sale of bottles. Moreover, Automatic Bottle Blowing Machine are best suited for manufacturers with high output, whereas prices of Automatic Bottle Blowing Machine seem to be unaffordable for small and regional manufacturers. In some cases, the manufacturing output volume is relatively lesser and the machine is used only for a short duration, resulting in high idle

time of the machine. This factor greatly reduces the productivity of the manufacturing firm.
