A checkweigher is an automatic or manual machine for checking the weight of packaged commodities. It is normally found at the offgoing end of a production process and is used to ensure that the weight of a pack of the commodity is within specified limits. Any packs that are outside the tolerance are taken out of line automatically. A checkweigher can weigh in excess of 500 items per minute (depending on carton size and accuracy requirements). Checkweighers can be used with metal detectors and X-ray machines to enable other attributes of the pack to be checked and acted upon accordingly. The global average price of checkweighers is stable from 2012 to 2016. With the situation of global economy, prices will be in slowly decreasing trend in the following five years. Europe is the largest consumption region of checkweighers, with a consumption market share nearly 26.27% in 2016.
