The global Automatic Lubrication Systems market was valued at 762.22 Million USD in 2021 and will grow with a CAGR of 3.44% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Automatic Lubrication Systems market, an automatic lubrication system (ALS), often referred to as a centralized lubrication system, and is a system that delivers controlled amounts of lubricant to multiple locations on a machine while the machine is operating. Even though these systems are usually fully automated, a system that requires a manual pump or button activation is still identified as a centralized lubrication system. Automatic or centralized lubrication systems provide precise amounts of lubricants - oil or grease - to moving parts, notably bearings, to minimize friction and wear. These systems are increasingly seen as mission-critical products aimed at improving the productivity, reliability, energy efficiency, environmental compliance and maintenance of vehicles and industrial machinery. Automatic lubrication systems include pumps, reservoirs, valves, pipes, metering system, connectors and controllers. Tools and equipment include grease guns, reels, meters, pumps and fluid drain systems. Design and installation services are playing a more important role than before.
