Potentiometric titration is a method to detect potential difference between the indicator electrode and reference electrode and thus determine concentration of chemical component, which reacts with reagent added to a solution potentially in equilibrium at the beginning. For the potentiometric method, an automatic titrator is usually used to perform the titration, and to obtain the titration curve. The production of automatic potentiometric titrator mainly distributes in Europe, North America and Japan. Production of automatic potentiometric titrator from the three regions contributed about 86.95% share in 2015. Mettler Toledo and Metrohm have located their plants in Switzerland while KEM is the leader in Japan market.
